AIR COOLED SCROLL TYPE  
WATER CHILLER AND HEAT PUMP

**RUIDONG GROUP**

[www.ruidonggroup.com](http://www.ruidonggroup.com)

Ruidong Group Co., Ltd is one modern large-scale enterprise integrating design, production, sales and installation of central air-conditioning products.

Ruidong is located in Dezhou City, Shandong Province. The Beijing-Shanghai High-speed Railway and Beijing-Shanghai Expressway passing through the city, make Dezhou become a key coordinate of the national economic artery. The registered capital of the group is one hundred fifty five and a half million yuan, covering an area of 300,000 square meters and construction area of 180,000 square meters.

#### Main business coverage:

##### 1. Host series:

- Water cooled series: centrifugal cold (hot) water unit, screw type cold water unit, screw type water (ground) source cooling and heating unit, scroll type water (ground) source cooling and heating unit.
- Air cooled series: screw type cold (hot) water unit, modular type cold (hot) water unit, mini type cold (hot) water unit, VRV series unit.
- Packaged Unitary unit: constant temperature and humidity unit, air (water) cooled unitary unit, dehumidification unit.

##### 2. Direct expansion series: Rooftop packaged unit, ducted split unit.

- 3. Terminal series: Purification air handling unit, combined air handling unit, fresh air unit, fan coil unit series.

## ENTERPRISE PROFILE

4. **Ventilation series:** Fire exhaust fan, roof fan, axial fan, diagonal fan, centrifugal fan, etc.
5. **Engine room equipment:** cyclone sand remover, water separator (separator), decontamination device, demineralized water device, plate heat exchange unit, constant pressure equipment, etc.
6. **Air conditioning accessories:** All kinds of fire valves, regulating valves, tuyere series.
7. **Other products:** Low-temperature industrial chillers, air-conditioning equipment for planting and breeding industries.

The R & D team composed of high-tech talents will continue to introduce new products, advanced production equipment and adopt the international ISO9001 quality management system as a strong guarantee for product quality. Precision testing equipment and rigorous testing methods are the fundamental insurance of quality and are timely and thoughtful. After-sales service solves the problems that may arise in use for you.

The company has established a complete sales and service system. Set up offices in 18 cities including Beijing, Tianjin, Shanghai, Xi'an, Shenyang, Chengdu and other cities to provide users with timely, efficient and high-quality pre-sales, sales and after-sales services.

Ruidong Air Conditioning wishes you: Cooling air for propitious summer, spring returns with warm air from Ruidong.

# CERTIFICATIONS

Ruidong group always takes "create first-class quality, offer sincere service" as the quality concept, builds customer-oriented quality management system, focuses on teamwork and insists on continuous innovation.

## 1. NOMENCLATURE

## 2. BRIEF INTRODUCTION

## 1. Scroll Type Air Cooled Water Chiller And Heat pump

#### **Applicable places:**

Suitable for new construction and renovation projects. It can be installed on the roof or outdoor courtyard. It does not allow special computer rooms and cooling towers. It is widely used in hotels, hospitals, theaters, gymnasiums, entertainment centers, commercial buildings, office buildings, and working conditions.

### **Features:**

- a. Easy to install and save space: no need for auxiliary equipment such as cooling water pumps and cooling towers, which can save a lot of materials and engineering installation costs. The freezer room can save investors valuable building space.
  - b. One machine for two purposes: heating and cooling can be achieved, and heating and cooling can be achieved through a set of systems

c. Modular system design for option: make each refrigeration system independent and spare each other. An abnormal situation in any refrigeration loop will not affect the normal operation of other loops; the unit is produced and transported with standard modular units, and assembled into a complete unit at the installation site. The standard modular unit is light in weight and small in size, which can save transportation And the cost of hoisting; free combination between modules can be carried out according to user requirements and the size of the air-conditioning area; when the unit is started, the computer-controlled compressors are started in sequence, reducing the impact on the grid current.

d. Excellent performance, safe and reliable.

## Configuration

### (1) Compressor

High-efficiency scroll compressor with low noise and long life.

### (2) Evaporator

Shell and tube evaporator, high-efficiency internally threaded copper tube, with low flow resistance and high efficiency.

### (3) Condenser

High-efficiency internally threaded copper tubes and high-quality hydrophilic aluminum coil fins, excellent production.

Secondary stamping and flanging technology, double corrugated sheet design, and mechanical tube expansion processing ensure that the copper tube and aluminum fins are tightly combined to obtain the best heat exchange effect.

### (4) Distribution control box

The microcomputer controller adopts a well-known brand and can operate stably and reliably at an ambient temperature of -15°C to 55°C.

### (5) Imported accessories

Selected refrigeration accessories of well-known brands are stable and reliable.

### (6) Safety Facilities

High and low pressure switch, antifreeze protection, oil heating belt, drying filter, overload protector, power protector.

## INTRODUCTION

## **2. Heat Recovery Type Modular Type Air Cooled Water Chiller (non-standard unit, please indicate when ordering)**

---

- a> Heat recovery unit is one unit that integrates two or three functions of refrigeration, heating and making domestic hot water. There are two types of heat recovery: 30% recovery and 100% recovery.
- b> The cooling only unit can recover the originally discarded condensing heat while cooling in summer, and can also be cooled separately.
- c> The comprehensive performance coefficient of the heat recovery unit is as high as 3.5 ~ 3.9. The addition of the heat recovery unit is equivalent to increasing the heat exchange area of the unit and enhancing the heat exchange effect, thereby reducing the energy consumption of the unit.

## **3. EVI type for application in low ambient temperature (non-standard unit, please specify when ordering)**

---

Adopting EVI scroll compressor and economizer, the unit can be used normally in low temperature environment, and greatly improve the heating operation efficiency of the unit in winter.

- a> The compressor has added one gas filling port, the suction air of the unit is increased, the circulation flow is increased, the heat exchange heat of the unit on the condensing side is greatly increased, the heating capacity of the unit is increased by more than 30%, and the performance coefficient Also greatly improved.
- b> By optimizing the matching of products, the amount of refrigerant evaporated in the evaporator at low ambient temperature is increased, which can effectively avoid the failure of the refrigerant to completely evaporate due to the poor evaporation effect and the return of the compressor.
- c> Increase the enthalpy of the compressor by supplementing the air, increasing the displacement of the compressor, ensuring that the product still runs stably at low ambient temperature, the compressor will not exceed the compression ratio of the compressor, ensuring the safe performance of the compressor Reduce the compressor discharge temperature and extend the life of the compressor.

### 3. SPECIFICATION

#### Air cooled water chiller (heat pump)- Standard type- 1

Model		RLSFW20(R)	RLSFW25(R)	RLSFW30(R)	RLSFW40(R)	RLSFW45(R)	
Nominal cooling capacity	kW	21.5	23.1	27	32	43	
Cooling input power	kW	7.5	7.9	9	10.4	13.3

## 5.INSTALLATION

### (1) Installation space requirements

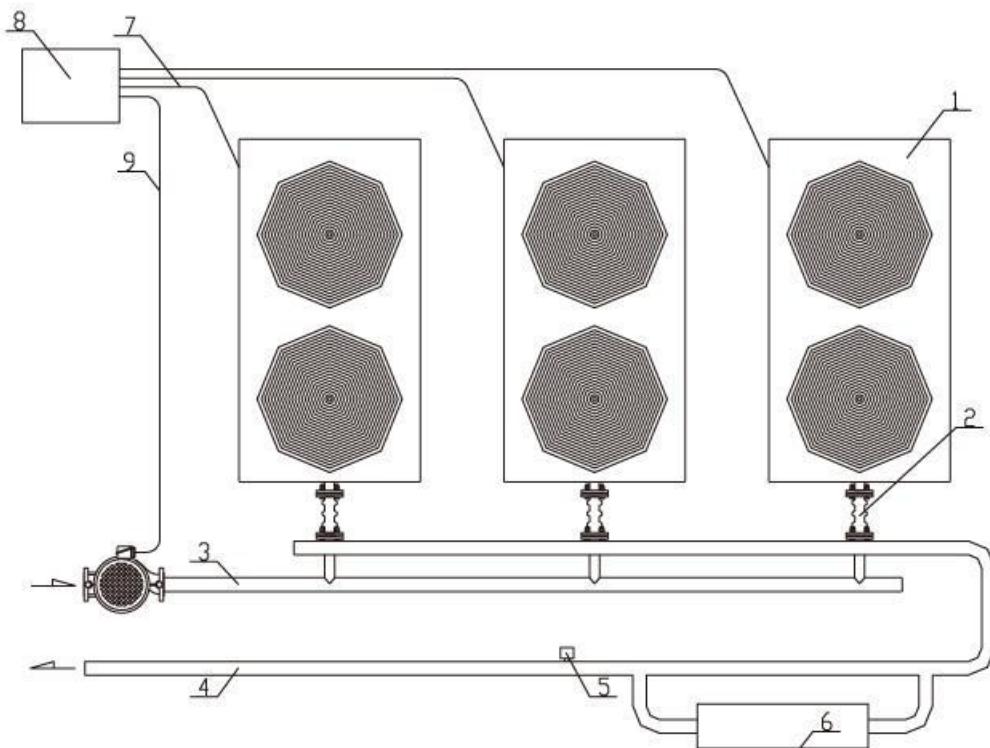

More than 2.0m~2.5m space should be reserved between the unit and the wall to ensure good ventilation.

More than 1.5m~2.0m space should be reserved between the unit and the single-sided wall to ensure good ventilation.

## (2) Typical wiring & piping connections

Combining RLSFWM series units as basic module (Take RLSFWM204 as an example)

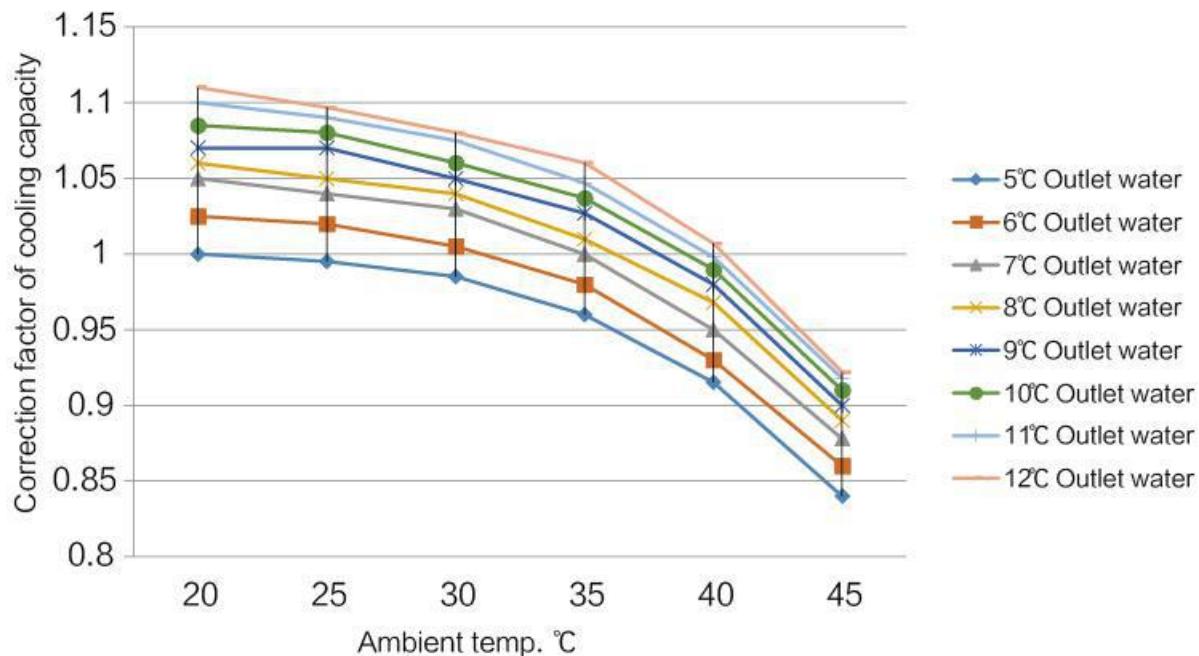

No.	Name	Specification
1	Unit	RLSFWM068R
2	Flexible connection	DN50
3	Inlet water pipe	DN80
4	Outlet water pipe	DN80
5	Water flow switch	LKB-01
6	Auxiliary electric heater	Install as required
7	Unit cable	3 × 10+2 × 6 total 3 groups
8	Distribution box	According to system requirements
9	Water pump cable	According to the pump power

### Remarks

1. The foundation can be a concrete structure (150-300mm above the ground) or a steel support, and the surface of the foundation should be flat;
2. 10-20mm rubber shock absorbers should be added between the chiller and the foundation;
3. The shortest distance between chillers is 600mm;
4. The foundation bearing capacity is designed based on the operating weight of the chillers.

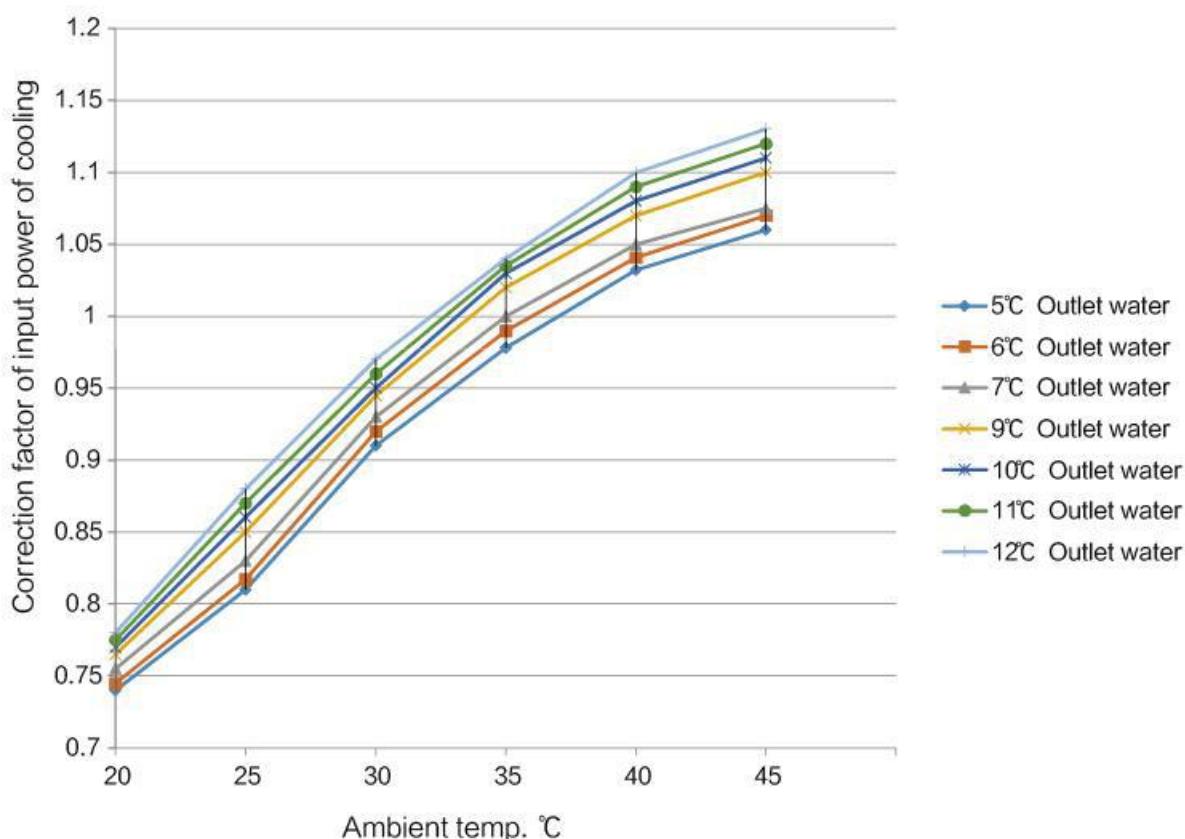

## 6. CORRECTION FACTOR

### Correction factor curve of cooling capacity

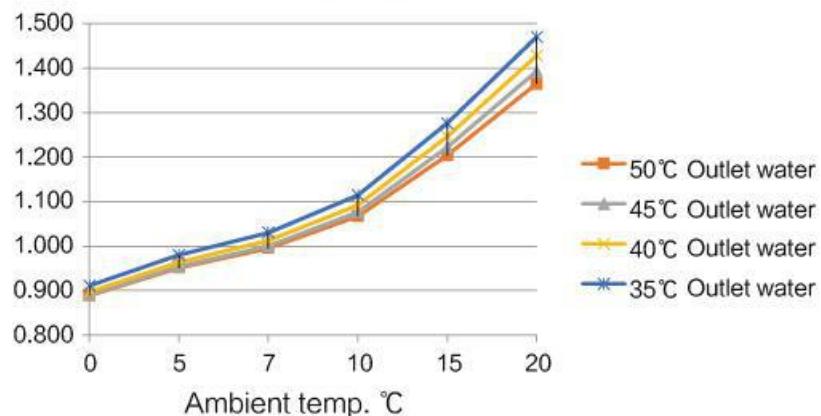

Ambient temp.	20°C	25°C	30°C	35°C	40°C	45°C
Outlet water temp.						
5°C Outlet water	1.000	0.995	0.985	0.960	0.915	0.840
6°C Outlet water	1.025	1.020	1.005	0.980	0.930	0.860

## TESTING CENTER

Testing center covers an area of 6500 square meters; total investment of 50 million RMB, is the largest and most complete detection device in the north of China , the testing range is from house-hold air conditioner to the centrifuge chillers.

Testing center adopt internationally renowned brand measuring instruments, including the United States Agilent data acquisition, Japan Yokogawa power meter, Saibi Ling platinum thermal resistance, to ensure the test accuracy.

Testing center can test multi-unit, air-cooled unit, fan coil unit, ceiling air handling unit, modular air handling unit,purifyiing air conditioning unit, water loop heat unit, air-cooled module chiller and air-cooled screw chiller.

# MAIN PROJECTS

High school building in Brazil

Presidential palace of Kazakhstan

Stadium in Tel Aviv

Planting base is in Beijing

Office building in America

Shanxi Linfen High Speed Rail Station

Hotel in Iraq

Shanxi Tongmei Group Zhangze Power Puzhou Power Generation Branch
